DESCRIPTORS: *Computers, Transistors, Vibrators
(Electrical), Gates (Circuits), Computer logic,

The article described two ring counters for forward and
backward counting which are composed of individual bi-
stable multivibrators equipped with LF transistors
OC 71. These multivibrator stages are so laid out that
logical circuits, particularly AND-gates can be con-
nected in sufficient numbers. In the ten-stage arrange-
ment, counting frequencies of up to about 80 kc (related
to one counting direction) can be achieved with the first
